

wästberg / w162 dalston

Product Information

w 162 dalston is influenced by the lamps commonly found in workshops and warehouses. These lamps display an honesty and practicality in their light output, materiality and durability. w 162 dalston refines and updates this practicality with the latest LED light source, directing light downwards, as well as partly illuminating its outside shade. The materials and construction are equally simple and durable.

A die-cast aluminium LED unit acts both as an efficient heat-sink and as a method of carrying different shade sizes in spun metal. The method of construction – die-cast LED unit and separate shade – allows for extensive customisation, using the RAL system. This gives you the possibility to match w 162 dalston perfectly to any interior specification. It is suitable for domestic, hospitality and contract use.

Design: Sam Hecht & Kim Colin

Material	The LED unit is made of die casted aluminium and the shade of steel.
Integrated multi-chip LED	The light technology is based on a highly energy-efficient multi-chip LED solution. It consists of a cluster of diodes, instead of several separate diodes. By using multi-chip LED, so called multi-shadows are avoided.
Light distribution	A reflector combined with a diffuser gives a very even light distribution over a large surface.
Glare protection	The construction of the LED unit and the shade protects from glare.
Dimmable	The w 162 dalston has integrated dimmable electronics, enabling dimming from external dimmers and lighting control systems.
Coloured inside	Using LEDs to project the light directly downwards, the shade is not used as a reflector. This gives the opportunity to paint the inside of the shade in the same colour as the outside, without destroying the quality of the light.
Customisation	w 162 dalston is constructed in a way that allows for extensive customisation (LED unit and separate shade) using two sizes of metal shades (available in a range of RAL colours).

Wästberg is a Swedish lighting company aimed at bringing back light to human proximity, by restoring the private spheres man has been deprived of during decades of misguided pursuit of efficiency and standardisation. The universally acclaimed lamps are created in close collaboration with some of the world's most renowned architects, designers and lighting experts, and have earned prestigious awards for their combination of aesthetics, cutting-edge technology and resource conservation.
