Materials

Emu-tex

It is a technical fabric for outdoor use made with polyvinyl chloride thread. It features exceptional strength to ensure durability: maximum resistance to UV rays, the elements, humidity and sudden changes in temperature.

Maintenance: Avoid prolonged contact with greasy substances and/or dyes, which may be absorbed by the coating material, causing permanent staining and deterioration of the yarn structure. Frequent washing: use water and non-abrasive, colourless liquid detergents with neutral PH. Leave the detergent to react for a few minutes, if required Rinse thoroughly with water at a temperature not exceeding 30°C. If pressurised devices are used, keep the diffuser tip at least 60/70 cm away from the surface of the item. Repeat the operation if necessary.

Steel

Iron and carbon alloy, with carbon content below 2%, treated to withstand the elements with the unique EMU-Coat anti-corrosio process.

Maintenance: Avoid prolonged contact with greasy substances and/or dyes, which may be absorbed by the coating material, causing permanent staining and deterioration of the yarn structure. Frequent washing: use water and non-abrasive, colourless liquid detergents with neutral PH. Leave the detergent to react for a few minutes, if required Rinse thoroughly with water at a temperature not exceeding 30°C. If pressurised devices are used, keep the diffuser tip at least 60/70 cm away from the surface of the item. Repeat the operation if necessary. To keep the product in good condition for a long time, we recommend storing it indoors and in a dry place during the winter to prevent condensate from forming. Before the winter and on a quarterly basis, if the products are kept near the sea, it is recommended to clean the metal surfaces with a soft cloth using water or detergent and protect them with Vaseline oil or car wax.
