

# ROPE TRICK

DESIGN BY STEFAN DIEZ

With its high-quality and progressive design, Rope Trick has been selected for inclusion in MoMA's permanent collection of design objects. Its innovative construction integrates LED technology within a dynamic new tailored form, and is made from a range of modern materials, including an internal plastic skeleton and woven PET for the light's arm, molded ABS for the base, and a specially designed aluminium LED module for dissipating heat.

The acrylic shade can slide along the neck of the light in a flexible way. This allows diffused light to be directed to different places in a room, producing a range of effects from a low-level ambient light to full brightness. The dimmer with memory adds to the sense that this design is at the vanguard of lighting technology.
